

CombiTel provides video transport solutions for all types of telecommunications infrastructure used by service providers including Ethernet, ATM, SDH/POS, IP/MPLS and Satellite. We supply hardware, network management software and also integration services enabling carriers and broadcasters to deliver high-quality digital video seamlessly across countries and continents.

We are proud of our staff's extensive expertise in design, implementation and support of large scale carrier infrastructure both in Australia and overseas.

CombiTel solutions are developed using products of our [Partners](#), who have global recognition of their brands, and leading OEM suppliers, who manufacture equipment for CombiTel.

The CT-9100 series Broadband Access Gateway is our flagship OEM product. Built to CombiTel specifications, it provides high-performance bidirectional interconnection between IP and ATM networks for various types of payloads including MPEG-2 Transport Stream. [Download the CT-9100 data sheet](#) for more information.
